SUMMARY

Senior Software Engineer with 6+ years building web, cloud, and AI-enabled products across SaaS platforms, LLM capabilities, data visualization, e-commerce integrations, and distributed systems. I translate business needs into maintainable technical decisions across frontend architecture, backend services, cloud infrastructure, and delivery quality.

EXPERIENCE

SENIOR SOFTWARE ENGINEER

december 2025 – present

MAIN 12 LLC

Translate business needs into maintainable SaaS and AI product architecture across web, cloud, and mobile surfaces, balancing delivery speed with long-term maintainability.

Build AI-enabled product capabilities using LLMs, Gemini, OpenAI, and scalable architecture patterns, treating AI as a product capability rather than only an acceleration tool.

Contribute to platform engineering across AI visualization and operational SaaS products, including Google Cloud infrastructure, queues/jobs, storage, shared contracts, and upload/mobile architecture.

TypeScript, Next.js, React, Payload CMS, PostgreSQL, Google Cloud, Redis, Gemini, OpenAI, LLMs

SOFTWARE ENGINEER

november 2024 – december 2025

Celerik

Contributed to a project monitoring platform that gave teams more reliable visibility into project health, replacing subjective status estimates with execution indicators.

Helped improve planning, prioritization, and operational control by surfacing delivery signals for earlier deviation detection and evidence-based decisions.

Designed and implemented AI, LLM, and RAG-based solutions, including backend services with FastAPI/Clean Architecture, OAuth2 authentication, and React frontend delivery.

Python, FastAPI, TypeScript, React, Tailwind, Jest, OAuth2, PostgreSQL, Cosmos DB, Azure, LLMs, RAG

CLOUD ENGINEER

may 2024 – present

ConexaLab

Built high-performance web platforms for real-time data visualization, statistics, and interactive maps, contributing across architecture, full-stack development, performance, and security. Applied hexagonal architecture and cloud-oriented engineering practices to reduce delivery friction and support continued evolution of a production platform.

Node.js, TypeScript, Python, React, Next.js, Tailwind, Maptiler, Google Earth Engine, Modal, MQTT, PostgreSQL, MongoDB, Vercel

CLOUD ENGINEER

january 2023 – january 2024

Melonn

Developed and maintained integrations with e-commerce platforms such as Mercado Libre, Liverpool, Shopify, and WooCommerce, focusing on data synchronization and external API connections.

Contributed to a multi-region AWS Disaster Recovery Plan, strengthening service continuity and resilience for production operations.

Node.js, TypeScript, Python, GraphQL, React, microfrontends, Playwright, microservices, AWS

EARLIER EXPERIENCE

2019 – 2022

Mayasoft · Binary Groups · Woombat · Bitnovo ·

UIS/IPRED

Built scheduling, business-process, e-commerce, biometric authentication, cryptocurrency, and internal education/logistics platforms.

Notable work includes RPA-supported legal contract automation, multi-channel commerce experiences, a Web Components biometric authentication SDK, and frontend delivery for a crypto trading platform.

TypeScript, React, Next.js, React Native, Node.js, NestJS, MongoDB, PostgreSQL, Web Components, Cypress, AWS, Google Cloud

CAPABILITIES · EDUCATION

UIS · 2015 – 2022

Web, Cloud & AI Product Engineering

Core capabilities: web product engineering, cloud/backend systems, AI-enabled product development, frontend architecture and performance, cross-platform/mobile delivery, technical leadership, and product ownership.

Selected technologies: TypeScript, JavaScript, React, Next.js, Node.js, Python, FastAPI, Payload CMS, PostgreSQL, MongoDB, GraphQL, REST APIs, OAuth2, Tailwind, AWS, Azure, Google Cloud, Redis, queues/jobs, Gemini, OpenAI, LLMs, RAG, Playwright, Jest, Cypress, Docker. Education: Systems Engineer — Universidad Industrial de Santander (UIS). EF SET English Certificate — B1 Intermediate.
